◆ **Good Quality** — Overall Score 86/100

Quality Scores

Prompt Quality

Powered by IBM Watson NLU

85 /100 **Good**

How clearly your idea was communicated to the AI pipeline

Build Confidence

Archon Engine

88 /100 **Good**

Based on code output, archetype detection, and pipeline success

Build Score Breakdown

FACTOR	POINTS	NOTE
Code Files	28	2 files
Visual Assets	40	6 imagen-backed pngs
Pipeline Success	20	Completed without error

Scoring Methodology: Prompt Quality is measured by IBM Watson NLU — keyword density, domain relevance, and entity extraction from the user's original prompt (scale 0–100). Build Confidence is computed by Archon's governance engine from pipeline outputs — files generated, archetype detection success, and pipeline completion status.

Brief

This project aims to develop a fan page dedicated to Final Fantasy 7, featuring key characters, weapons, and an interactive game map. The site will serve as a hub for fans to explore character details, weapon information, and navigate the game's world.

Goals

- Provide detailed profiles for main characters like Cloud, Barret, and Tifa.
- Include a comprehensive section for weapons with descriptions and stats.
- Implement an interactive map of the game world for user navigation.
- Ensure the site is visually appealing and aligns with the Final Fantasy 7 theme.
- Optimize the site for both desktop and mobile users.

Core Features

- Character profiles for Cloud, Barret, and Tifa with images and descriptions.

- Weapons section with a list of weapons, their stats, and images.
- Interactive game map that allows users to click on locations for more information.
- Responsive design for optimal viewing on various devices.
- Search functionality to quickly find characters or weapons.

Build Plan

Milestone 1: Project Setup & Foundation

PLAN-1	Initial Project Planning and Tech Stack Confirmation based on PRD.
BE-1	Design database schema for characters, weapons, and map locations.
BE-2	Design API endpoints for retrieving character, weapon, and map data.
FE-1	Set up the frontend project structure and basic build pipeline.
FE-2	Develop core design system elements and theming aligned with Final Fantasy 7 aesthetics.
DOC-1	Create initial API documentation for backend endpoints.

Milestone 2: Core Content Implementation (Characters & Weapons)

BE-3	Implement backend API endpoints for character data retrieval.
BE-4	Implement backend API endpoints for weapon data retrieval.
FE-3	Develop the UI component for displaying detailed character profiles.
FE-4	Develop the UI component for displaying the weapons list and details.
FE-5	Integrate character and weapon data from backend APIs into their respective frontend components.
QA-1	Validate accuracy and completeness of character and weapon data displayed on the site.

Milestone 3: Interactive Map & Search

BE-5	Design and implement backend data structure and API for interactive map locations and details.
FE-6	Develop the interactive game map UI component with clickable locations and information overlays.
FE-7	Implement frontend search functionality for characters and weapons.
BE-6	Implement backend API endpoint for searching across characters and weapons.
QA-2	Test interactive map functionality and search accuracy.

Milestone 4: Build & Integrate Fan Page Site, Responsive Design & Polish

FE-SCAFFOLD-1	Build the complete Final Fantasy 7 Fan Page Site as a single self-contained HTML file, integrating all core features.
FE-8	Implement responsive layouts for optimal viewing on various devices (desktop, tablet, mobile).
FE-9	Conduct cross-browser compatibility testing to ensure consistent experience.
FE-10	Implement accessibility enhancements (ARIA attributes, keyboard navigation) for improved usability.
QA-3	Perform comprehensive UI/UX review and bug fixing across all features.

Milestone 5: Deployment Preparation

DEVOPS-1	Set up the hosting environment for the fan page site.
DEVOPS-2	Configure CI/CD pipeline for automated testing and deployment.
DOC-2	Create a comprehensive deployment guide and maintenance instructions.
QA-4	Conduct final User Acceptance Testing (UAT) and performance testing before launch.
