Brief

This document outlines the requirements for a Crypto Portfolio Tracker application. The application will enable users to monitor their cryptocurrency investments, view real-time price data, track their holdings, and review a historical activity feed. The primary goal is to provide a clear and intuitive platform for managing digital asset portfolios.

Goals

- Provide users with accurate, real-time cryptocurrency price data.
- Enable users to easily track and manage their diverse crypto holdings.
- Offer a clear overview of portfolio performance and historical activity.
- Ensure a secure and reliable platform for personal financial data.
- Deliver an intuitive user experience for both novice and experienced crypto investors.

Core Features

- User registration and secure login.
- Dashboard displaying overall portfolio value and performance.
- Real-time price display for supported cryptocurrencies.
- Ability to manually add, edit, and delete cryptocurrency transactions (buy/sell/transfer).
- Holdings table showing quantity, average buy price, current value, and profit/loss per asset.
- Search and select from a comprehensive list of cryptocurrencies.

Build Plan

Project Foundation

PLAN-1

Define API contracts for user authentication, transaction management, and crypto data.

PLAN-2

Design the database schema for users, transactions, and crypto holdings.

PLAN-3 Set up project repositories, basic build configurations, and CI/CD pipelines.

Backend Services

- BE-1** Implement user authentication API endpoints (registration, login, logout).
- BE-2** Develop transaction management API endpoints (add, edit, delete, retrieve transactions).
- BE-3** Integrate with external cryptocurrency price data APIs to fetch real-time prices.

Frontend Dashboard & Transaction UI

- FE-1** Build the complete Crypto Portfolio Tracker dashboard as a single self-contained HTML file, displaying overall portfolio value, 24h change, holdings table, and activity feed.
- FE-2** Develop forms for adding, editing, and deleting cryptocurrency transactions.
- FE-3** Implement cryptocurrency search and selection UI for adding new assets.

Data Integration & Analytics

- FE-4** Integrate real-time price data from the backend into the frontend dashboard.
- BE-4** Implement backend logic for portfolio analytics calculations (e.g., profit/loss, 24h change).
- FE-5** Display calculated portfolio analytics (P/L, 24h change) on the dashboard.

Quality Assurance & Deployment

- QA-1** Conduct comprehensive end-to-end testing for all core features and user flows.
- QA-2** Optimize application performance and ensure responsiveness across devices.
- DOC-1** Prepare deployment documentation and a basic user guide for the application.
