Brief

This document outlines the requirements for developing a dedicated landing page for WriteFlow, an AI-powered writing assistant. The primary goal is to introduce the product, highlight its key benefits, and capture user interest. This page will serve as the initial touchpoint for potential users, driving sign-ups or further engagement.

Goals

- Generate a minimum of 500 leads (email sign-ups) within the first month of launch.
- Increase brand awareness for WriteFlow among target users.
- Clearly communicate the core value proposition of WriteFlow.
- Achieve a conversion rate of at least 5% from page visitors to lead submissions.
- Provide a clear and intuitive user experience for visitors.

Core Features

- Hero section with a compelling headline, sub-headline, and primary Call-to-Action (CTA).
- Concise explanation of WriteFlow's core benefits and features.
- Testimonials or social proof section from early users or industry experts.
- Clear and prominent lead capture form (e.g., email sign-up for early access/newsletter).
- Responsive design for optimal viewing on desktop, tablet, and mobile devices.
- Privacy Policy and Terms of Service links in the footer.

Build Plan

Planning & Setup

PLAN-1

Define project scope, gather brand guidelines, logo, and initial messaging from the client.

PLAN-2

Set up version control (Git repository) and configure basic project structure.

PLAN-3 Install necessary development dependencies (e.g., React/Next.js, Tailwind CSS).

Core Landing Page Development

- FE-1** Build the complete WriteFlow landing page as a single self-contained HTML file, incorporating hero, features, testimonials, FAQ, and CTA sections.
- FE-2** Implement responsive design for optimal viewing across desktop, tablet, and mobile devices.
- FE-3** Populate all sections of the landing page with provided copy, images, and other assets.

Interactivity & Integration

- FE-4** Implement the lead capture form with client-specified fields and front-end validation.
- BE-1** Set up a serverless function or integrate with a third-party service (e.g., Formspree) for secure form submission and lead storage.
- FE-5** Integrate Google Analytics 4 for tracking page views, conversions, and user behavior.
- FE-6** Implement interactive elements such as FAQ accordion functionality and CTA button click feedback.

Testing & Optimization

- QA-1** Conduct comprehensive cross-browser and device compatibility testing.
- QA-2** Perform an accessibility audit (WCAG 2.1 AA compliance) and address identified issues.
- FE-7** Optimize page load performance by compressing images, minifying code, and implementing lazy loading.
- QA-3** Proofread all text content for grammatical errors, typos, and verify all links are functional.

Deployment & Monitoring

- OPS-1** Configure the chosen hosting environment (e.g., Vercel, Netlify) for the static landing page.
- OPS-2** Deploy the optimized landing page to the production environment.
- OPS-3** Set up conversion tracking and monitoring dashboards in Google Analytics.
